## MGRC completes 100th human genome

Posted on 17 November 2011 - 01:49pm

**KUALA LUMPUR (Nov 17, 2011):** Malaysian Genomics Resource Centre Bhd (MGRC) today announced that it has successfully completed its 100th human genome from a diverse mix of Malaysian, European and Australian individuals.

Its chief scientific officer, Dr Stephen Rudd, said with the milestone MGRC has clearly demonstrated its capability in sequencing and analysing human genomes.

"It also further highlights the fact that genomics technologies and expertise are available in Malaysia for both the local and international life sciences community," he said today in a filing to Bursa Malaysia.

MGRC said the results of the data generated from these genomes has helped identify and compare highly represented patterns of common and clinically-relevant genetic variations within Malaysian and other population. – *Bernama*
